EDUCATION

Arizona State University

Bachelor of Science in Computer Science, Emphasis in Cybersecurity | GPA: 3.5

Tempe, AZ

Aug. 2022 – May 2026

EXPERIENCE

Cognite

Software Engineer — Atlas AI Platform Team

Tempe, AZ

May 2026 – Present

- Build and maintain Python-based backend services and REST APIs for an industrial AI agent platform, applying secure coding practices and input validation across all service boundaries.
- Contributed to LLM Guardrails integration research, benchmarking latency and safety tradeoffs; findings reduced average response latency by 12% after optimization.
- Engineered a user feedback mechanism capturing qualitative AI error reports, increasing actionable security and quality submissions by 45%.

Software Engineer Intern — Agent Experiences Team

February 2026 – May 2026

- Identified and resolved front-end vulnerabilities and software bugs, reducing reported UI issues by 30% and improving application stability.
- Developed a secure chat export feature with controlled data access, achieving 40% adoption among active users within the first month.

Accenture

Technology Architecture Analyst

Los Angeles, CA

June 2025 – August 2025

- Diagnosed and remediated backend security vulnerabilities and logic defects in TypeScript services, decreasing crash frequency by 20%.
- Queried, cleansed, and validated large datasets through Amazon Athena to identify and resolve downstream data integrity issues, increasing data accuracy by 32%.
- Supported CI/CD pipeline automation and deployed Azure cloud resources using enterprise DevOps tooling, reducing deployment time by 15%.

PROJECTS

Ransomware Behavior Simulator | Python, Cryptography, Security Research

November 2025

- Architected a ransomware simulation platform implementing Fernet (AES-256) encryption with automated key management, recursive file traversal, and a complete attack/recovery lifecycle for incident response training.
- Engineered production-grade safety features including path validation, automated backup systems, and a confined execution environment to prevent unintended system modifications.
- Designed CLI tool with comprehensive logging and encrypt/decrypt/backup/restore operations for hands-on security training.

Password Manager | Python, Cryptography, JSON, Script

February 2024

- Developed a secure password manager utilizing AES-GCM encryption with unique nonce generation and Script key derivation to prevent brute-force and rainbow table attacks.
- Implemented encrypted JSON-based storage with secure password retrieval, enforcing confidentiality and integrity of stored credentials.

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript, TypeScript, SQL, HTML/CSS

Security Tools: Wireshark, Nmap, Ghidra

Cryptography: AES-GCM, AES-256 (Fernet), Script, Nonce Generation, Key Derivation

Cloud & DevOps: AWS (Athena, S3), Microsoft Azure, CI/CD

Developer Tools: Git, VS Code, Visual Studio, IntelliJ

Relevant Courses: Network Security, Network Forensics, Operating Systems, Information Assurance (CSE 365)
